

Project: 080419 Sticky Scheduler
Team: 080419 Android

Issues/ Agreement:

1. 'Widget Support' and 'Integrate into Calendar' use cases are vague, they do not have any explanations or descriptions about them.
2. The use-case diagram is a bit generic. The application is a planner, but there are many existing applications that have similar functions seen in the group's diagram. They have already told us that they are planning to put special features in their application, but it's not seen in the use-case diagram.
 - Add special features to the application.

Outcome:

Correct minor mistakes. Provide missing information to clarify some aspects.
